Generation of **superhelical** time-varying OAM beam with space-time-coding digital metasurface

Authors: [Jingxin Zhang](#), [Peixing Li](#), [Alex M H Wong](#), [Jensen Li](#)

Abstract: The recently proposed extreme-ultraviolet (EUV) beams with time-varying orbital angular momentum (OAM) realized by high-harmonic generation (HHG) provides extraordinary tools for quantum excitation control and particle manipulation. However, such an approach is not easily scalable to other frequency regimes. Here, we design a space-time-coding digital metasurface operating in microwave frequencies... [▽ More](#)

Submitted 23 September, 2022; **originally announced** October 2022.

Comments: 16 pages, 4 figures

Localized vorticity enhancement through **superhelical** coherent structure in observed tornadic supercells

Authors: [Marcus Büker](#), [Luke Odell](#), [Joshua Wurman](#), [Karen Kosiba](#), [James Marquis](#)

Abstract: New diagnostic methods are presented for localized, barotropic vorticity evolution in tornadic environments. These methods focus on superhelicity, a quantity shown to be strongly related to local maxima in vorticity tendency. Mobile Doppler radar retrievals from three well-known cases of tornadogenesis were studied with this new approach. The results show promise for detecting and tracking coheren... [▽ More](#)

Submitted 19 August, 2014; **originally announced** August 2014.

Comments: To be submitted to Geophysical Research Letters. Waiting on additional authorship arrangements and feedback

Bubble statistics and positioning in **superhelically** stressed DNA

Authors: [Daniel Jost](#), [Asif Zubair](#), [Ralf Everaers](#)

Abstract: We present a general framework to study the thermodynamic denaturation of double-stranded DNA under superhelical stress. We report calculations of position- and size-dependent opening probabilities for bubbles along the sequence. Our results are obtained from transfer-matrix solutions of the Zimm-Bragg model for unconstrained DNA and of a self-consistent linearization of the Benham model for super... [▽ More](#)

Submitted 1 September, 2011; **v1** submitted 16 March, 2011; **originally announced** March 2011.
