A new hypothesis could connect two of physics’ greatest mysteries: dark energy and quantum gravity

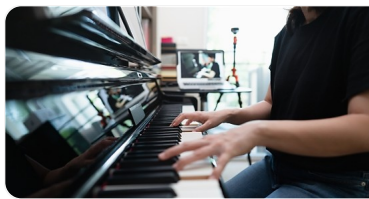

Story by Dainet Sierra • 3d • 3 min read

According to this hypothesis, dark energy could be a natural effect of quantum gravity acting on the geometry of spacetime itself.

[L](#) A new paper proposes a way to link quantum gravity and dark energy in a single explanation of the dynamics of the Universe. Credit: UC Santa Barbara.

Quantum gravity and dark energy are among the biggest unsolved problems in physics. The former seeks to describe gravity when quantum effects become relevant, while the latter is the name given to the component thought to be responsible for the accelerating expansion of the universe.

The challenge also lies in the enormous difference between the scales involved: quantum effects of gravity are typically associated with microscopic scales, while
